Please find below and/or attached an Office communication concerning this application or proceeding.

| 1) Responsive to communication(s) filed on | Application No. Applicant(s) | | | | | | |
|---|--|--|---|---|--|--|--|
| John Manning | | | | | | | |
| - The MALING DATE of this communication appears on the cover sheet with the correspondence address - Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ③ MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MALINING DATE OF THIS COMMUNICATION. Estambased in time may be available under the prosensed of 37 CPR 1.13(b), in no event, nowers, may a reply be timely fixed. If NO period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for the specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for reply is specified above, the maximum statistical period for the specified above, the maximum statistical period for the maximum statistical period for the maximum statistical period for the period for the protection of claims and period for the above claim(s) is far allowed. | Office Action Summary Examiner Art Unit | | | | | | |
| Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Sure of the provision of the provision of 37 CFR 1.35(b). In or event, however, may a reply be timely filed or the provision of 37 CFR 1.35(b). In or event, however, may a reply be timely filed or provision of the mailing date of this communication, even if timely filed, may reduce any correct patent term adjustment. See 37 CFR 1.704(b). Status 1) □ Responsive to communication(s) filed on □ 2a) □ This action is FINAL. 2b) □ This action is non-final. 3) □ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) □ Claim(s) 1.2 and 5-25 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5□ □ claim(s) 1.2 and 5-25 is/are rejected. 7□ □ Claim(s) 1.2 and 5-25 is/are rejected. 7□ □ Claim(s) 1.2 and 5-25 is/are rejected. 7□ □ Claim(s) 1.2 and 5-25 is/are rejected to by the Examiner. Application Papers 9□ □ The specification is objected to by the Examiner. 10□ □ The drawing(s) filed on 1 is/are: a) □ accepted or b) □ objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in aboyance. See 37 CFR 1.85(a). Replacement drawing see(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11□ □ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12□ □ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) □ Craffied copies of the priority documents have been received in | | | <u> </u> | | | | |
| WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Edencios of time may be available under the provided most part of this communication. Edencios of time may be available under the provided of this communication. Failus to recy without the communication of the communication. Failus to recy within the cat or ended period for recytled. By a think, cause the application to become ABANDONED 54 U.S. 2, 1333. Any reply received by the Ciffice later than these months after the mailing date of this communication, even if timely filed, may reduce any seamed patient trem dijustment. See 37 CFR 1.704(b). Status 1) | | | pears on the cover sheet with the o | correspondence address | | | |
| 1) Responsive to communication(s) filed on | WHIC - Exte after - If NC - Failu Any | CHEVER IS LONGER, FROM THE MAILING DATE IN THE MAILING DATE IN THE MAILING DATE IN THE MAILING DATE IN THE MONTHS FROM THE MAILING DATE IN THE MONTH | ATE OF THIS COMMUNICATION 36(a). DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to the amended claims have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2, 5-8, 10, 12, 14 and 16-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itakura (U.S. Patent No. 6,351,745) in view of Baji et al., (U.S. Patent No. 5,027,400).

Itakura et al. teach a system used in a communication network that allows clients to access information Internet over a broadband connection as well as receive messages such as advertisements. User preferences are stored in a user database and advertisements are sent to users based on their preferences. A billing system is also taught to charge the advertiser based on the advertisements displayed to the user.

With respect to claims 1, 6, 16, and 20, Itakura teaches the claimed information processing apparatus. The claimed "first registration means for registering general additional information regarding said contents data" is met by Itakura's means to store data and identifying information. In column 8, lines 1-11 Itakura teaches storing data

which represents the location of the data requested. This information may also include, for example, a home page address IURQ of a store on the world wide web. Because applicant has claimed a plurality of types of "general additional information" in the alternative, the burden on the examiner is only to satisfy a single element. Therefore, the claimed "contents ID" is met by storing in association an ID, such as the above noted URL. This is explicitly taught in column 8, lines 7-11. In this manner, Itakura meets the claimed first registration of "general information" regarding said contents data. The claimed "second registration of additional individual information..." is met by Itakura in the registering of client preferences in item S416 of figure 17. User information such as sex, marriage status, occupation, etc. are stored in the message user database 34 of figure 6. Itakura also teaches that a transmittal condition database 36 can record additional individual information regarding goods that the user has already shown interest in, claimed "on the basis of at least said contents data," to ensure that suitable advertisements are sent according to user preferences in column 10, lines 48-58. As taught in column 10, lines 21-30, this database stores message URL's that identify each message and the corresponding transmission conditions. By using the user information to find proper messages, the message URL's are also "registered" for individual users based on preferences as "additional individual information," as claimed. The claimed storage means for storing said first and second registration information are thus met by the message user database 34 and the transmittal condition database 36. The stored general additional information and additional individual information is extracted using a characteristics reader used to

retrieve characteristics from the databases as taught in column 27, lines 48-49. If a user is inactive, messages including general and individual additional information are not sent. Rather, only when "a delivery request for contents data" is received will the message distribution apparatus search and extract required information (col. 15: 13-42). The individual additional information "is extracted on the basis of user information" comprising at least one of user status and user usage classification" by extracting based on user status, active or idle, and user characteristics, in order to accurately target active users. Furthermore, the claimed generation means for generating individual data to be transmitted based on the general and individual additional information is met by the message distribution apparatus 39 of figure 1. Itakura teaches receiving a request for contents, followed by the reading of user preferences from said message user database 34 and transmittal condition database 36. Based on user preferences, messages as well as a URL relating to additional information are generated as taught in column 10, lines 31-58. The transmission means for transmitting said contents data, general additional information, and additional individual information is met by Itakura in column 11, lines 60-67 and column 12, lines 1-8. Itakura teaches an Internet connection with known communication method and message distribution apparatus 39 for distributing said individual data as messages to a terminal 10 of figure 1. With respect to displaying said contents data, general additional information, and individual additional information simultaneously, examiner refers applicant to Figures 29 and 33. As seen in Figure 29 and 33 a contents data region 60 is shown, a "Location" region" is shown for displaying the claimed "general additional information regarding

said contents data," a message viewer window 62 exists to display claimed "individual additional information" which is retrieved as noted above using user database 34 and transmittal condition database. Examiner notes with reference to Figure 12, item 64 of applicant that the "additional information" region includes an "id link to other data," as taught by Itakura with Home Page button 64 that is an ID link to other data regarding the individual data. The claimed limitation of "whereby contents data is delivered together with extracted individual additional information and extracted individual additional information in response to a request for usage generated by said other apparatus said extracted individual additional information and extracted individual additional information being generated by selecting from a database of additional information according to said request" is met by Figure 4 and that discussed above. "The message viewer window 62 has a home page button 64, a material request button 66, a halt/resume button 68, and a guit button 69. When the home page button 64 is selected, the browser window 60 displays the home page corresponding to the message in the message viewer window 62. When the material request button 66 is selected, the message manager 24 transfers informational materials concerning the goods advertised in the message displayed in the message viewer window 62. The message viewer window 62 displays these informational materials. Within the display of the message and the informational materials there is a button for ordering the displayed goods" (Col 9, Lines 13-24). Itakura does not teach the first registration means registering information by splitting the contents of data per segment, scene, or object. Furthermore, Itakura teaches the second registration means registering individual additional information with

URL addresses but not split per segment, scene, or object as claimed. Baji teaches a cable distribution network used to transmit regular programming as well as commercials, claimed additional information, in a television broadcast. Baji explicitly teaches the transferring of desired program and advertisement to the main controller 106 of the head end in column 4, lines 13-17. The main control program then controls the integration of the advertisements with the regular programming, splitting the regular programming up as in claim 3 of applicant and inserting commercial or advertisement scenes as in claim 4 of applicant. The table and method for controlling this process is shown in figure 10 and taught in column 7, lines 46-65. Examiner notes that it is well known in the industry to split up television programs, whether viewed over conventional television or via Internet broadcast, up into scenes with commercials show in between. Furthermore, Itakura teaches in column 9, lines 10- 13 that the message viewer may display a new message every predetermined time interval, and the simultaneous display of this message noted in response to claim 1. Baji similarly teaches splitting a television program with registered commercials at predetermined time intervals as seen in Figures 5A-5P, which splits the program per segment or scene as claimed. It clearly would have been obvious for one skilled in the art at the time to modify the simultaneous displaying of contents data and additional advertising information taught by Itakura by the data stream splitting techniques of Baji in order to integrate advertisements with the regularly viewed content.

With respect to claim 2, the claimed means for recording charging information on the basis of individual data generated is met by Itakura in the message access log 37 as seen in figure 12. Itakura teaches recording information regarding the access of said individual information data in column 1, lines 9-21.

Page 7

With respect to claim 5, the claimed updating charging information by updating "charges to at least an end user for use of said contents data and/or individual metadata on the basis of said generated metadata" is taught in col. 10:59+ through col. 11: 8 by relieving a charge from a user based on a connection log. The connection log indicates what messages are recognized by a user and bills the message provider in order to relieve the user of their connection fee.

With respect to claim 7, the claimed recording medium wherein a program for controlling an information processing apparatus to deliver data over a network is taught by Itakura in the message manager 24. Itakura teaches message viewer software 76 of figure 3 to be installed on the terminal device in a recording medium in column 8, lines 43-67 and column 9, lines 1-3. Itakura further teaches that the recording medium can be a variety of devices such as RAM, DVD's, floppy disks, CD-ROM, tap media, semiconductor memory etc in column 25, lines 5-24. The software in the terminal device is used to communicate with message manager 24 of Figure 1 over the Internet. The message manager is taught to send and receive messages with the terminal as well as access databases. In this manner the message manager meets the claimed program because it controls the processing of all limitations set forth and addressed in claim 6. With respect to "said contents data, general additional information, and individual additional information are simultaneously displayed on a display screen at said other apparatus" these features are taught as seen in Figures 29 and 34 and noted

in response to claim 1. The claimed limitation of "whereby contents data is delivered together with extracted individual additional information and extracted individual additional information in response to a request for usage generated by said other apparatus said extracted individual additional information and extracted individual additional information being generated by selecting from a database of additional information according to said request" is met by Figure 4 and that discussed above. "The message viewer window 62 has a home page button 64, a material request button 66, a halt/resume button 68, and a guit button 69. When the home page button 64 is selected, the browser window 60 displays the home page corresponding to the message in the message viewer window 62. When the material request button 66 is selected, the message manager 24 transfers informational materials concerning the goods advertised in the message displayed in the message viewer window 62. The message viewer window 62 displays these informational materials. Within the display of the message and the informational materials there is a button for ordering the displayed goods" (Col 9, Lines 13-24).

With respect to claim 8, Itakura teaches the first apparatus as addressed in response to claim 1 above. Although Itakura teaches receiving and processing a request for data to be transmitted, Itakura does not teach a second apparatus having delivery request means so as to transfer said contents data to said first apparatus with means for integrating said contents data and said individual data supplied from the first apparatus. Baji teaches a main control unit 106 for controlling the access of contents data and additional individual data. Baji further teaches a second information apparatus

the terminal control unit 113 of figure 1 to be used in conjunction with a delivery request. The commercials may be integrated into the regular contents data by storing commercials in a buffer on the terminal control unit and then integrating them into the regular content data in column 8, lines 30-48. In this manner, Baji teaches a delivery request for contents data by the main control unit, claimed first apparatus, and output means in the terminal unit, claimed second apparatus, for integrating the contents data and individual data. It would have been obvious for one skilled in the art at the time to modify the targeted advertisement apparatus of Itakura with the second apparatus of in order to integrate advertisements with regularly viewed content for the user.

With respect to claims: 10, 12, and 14 all of the limitations that are reflected in claim 1 as addressed above.

With respect to claim 17, Itakura teaches delivering messages and additional information to users based on their viewing history, as well as charging message providers in response to the delivery of the messages. As noted above, Itakura teaches receiving a request for a message, followed by the reading of user preferences from said message user database 34 and transmittal condition database 36. Based on user preferences, characteristics including status, and usage history as seen in Figures 7, 8, and 9, claimed user status and classification, the messages suitable for individual viewers are generated. This general purpose additional information is displayed in the message viewer window 62 and as well ms a URL link through home page button 64. Although the specific term "metadata" is not used, the generation of individual metadata from general additional information and extracted additional information is taught.

Examiner notes that applicant defines metadata as additional information that describes audio and video data on page 1, lines 18-21. This information is taken as commonly defined in the industry to include information such as name, size, data type, length. location, ownership, associations, and a number of other factors that describe contents data. The claimed limitation of "whereby contents data is delivered together with extracted individual additional information and extracted individual additional information in response to a request for usage generated by said other apparatus said extracted individual additional information and extracted individual additional information being generated by selecting from a database of additional information according to said request" is met by Figure 4 and that discussed above. "The message viewer window 62 has a home page button 64, a material request button 66, a halt/resume button 68, and a guit button 69. When the home page button 64 is selected, the browser window 60 displays the home page corresponding to the message in the message viewer window 62. When the material request button 66 is selected, the message manager 24 transfers informational materials concerning the goods advertised in the message displayed in the message viewer window 62. The message viewer window 62 displays these informational materials. Within the display of the message and the informational materials there is a button for ordering the displayed goods" (Col 9, Lines 13-24). As seen in Figures 11 and 12, a record is formed with information describing the extracted information including a note as to whether material requests are made. This information is taught to be used to "update charging information on the basis of said generated individual metadata" in column 10, lines 20-38. The claimed transmission of contents

data and individual metadata, information describing the audio video contents data, is met as noted above.

With respect to claim 18, the claimed general additional information comprising a "time or date of filming a video scene of contents data" is not taught by Itakura.

Numerous various ways for describing data are known in the art. The Examiner takes

Official Notice that it was well known in the art at the time of the invention to store time or date of filming a video scene. It would have been obvious for one skilled in the art at the time of the invention to modify the system of Itakura by storing time or date of filming of a scene in order to provide users of the system with an indication of how recent the filming is.

With respect to claims 19 and 21-22, aforementioned combined teaching does not teach storing an explanation of a video scene or a part and name covered by additional information. Examiner takes Official Notice that it was well known in the art at the time of the invention to store an explanation of a video scene, part and name covered by additional information. It would have been obvious for one skilled in the art at the time of the invention to modify the combined teaching by storing an explanation of a video scene in order to provide users of the system with an indication the content of programming.

With respect to claims 23-24, aforementioned combined teaching does not teach general additional information comprising a segment number or object number.

Examiner takes Official Notice that it was well known in the art at the time of the invention to utilize segment and object numbers. It would have been obvious for one

skilled in the art at the time of the invention to modify the combined teaching by using segment and object numbers in order to fully describe contents data and facilitate selection.

Page 12

With respect to claim 25, aforementioned combined teaching does not teach general additional information comprising additional information classification. The Examiner takes Official Notice that it was well known in the art at the time of the invention to classify additional information. It would have been obvious for one skilled in the art at the time of the invention to modify the combined teaching by classifying additional information in order to fully describe contents data and facilitate selection for users.

4. Claims 9, 11, 13, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itakura et al. (6,351,745) and Baji (5,027,400), and further in view of Kitsukawa et al. (6,282,713).

With respect to claims 9, 11, 13, and 15 neither Itakura nor Baji explicitly teach splitting registration per object appearing within said contents data Examiner notes that the use of "hot spots" is well known in the art, and that these systems would read on many of the limitations of claim 1. Hot spots are used to allow the viewer to obtain additional information regarding items in a display. A display is split per object based on items, claimed additional information, with additional individual information consisting of a URL link that provides additional information about the item appearing in within the display. To these means, Kitstzkawa et al. (6,282,713) teach an electronic advertising system utilizing hot spots to link users to additional information regarding displayed

Application/Control Number: 09/879,353 Page 13

Art Unit: 2614

products. As seen in Figure 5, items containing additional information are separated per object and URL- information, claimed individual additional information, is registered for each item. As seen in Figure 4, item 410, a user may select an item, claimed "request," and as taught in column 7, lines 34-40 the 111 advertisement or web link may be displayed simultaneously with the regularly playing programming using well known picture in picture techniques. It would have been obvious for one skilled in the art at the time of the invention to further modify the techniques taught by Itakura and Baji by splitting additional information per object as taught by Kitsukawa in order to provide additional information relating to multiple items displayed in a program that the user may have interest in.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Manning whose telephone number is 571-272-7352. The examiner can normally be reached on M-F: 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
